## Chamberlain whisper drive plus garage door opener troubleshooting

There are few things more frustrating than a LiftMaster garage door that isn't operating properly. A faulty garage door puts your belongings at risk and poses a potential safety hazard if unauthorized people can gain access to your property. Following certain troubleshooting steps may help eliminate any issues. **Garage Door Opens Slightly Before Suddenly Closing** Garage doors that do this most likely need to have the springs located at the top of the door replaced. Technically, you could replace only the springs that are broken. If the springs are less than three years old, but most repair people would tell you to replace all of the springs at the same time. Doing so is cheaper over time than only replacing the ones that are damaged. **Garage Door Closes Before Immediately Opening Again** When this happens, you're most likely dealing with a misalignment issue with the garage opener's photo eye. The photo eye has two sensors that are located on each side of the garage. One sensor sends a beam toward the other, and if something blocks that beam, the sensor prevents the door from closing. Check that the photo eye is working by looking for a flashing green light. Check the alignment of the photo eye by looking to see if there's anything its line of sight that would cause the block. If it's clear, measure each photo eye from the ground up to the center of each eye. Match up the measurements and make sure that they're aligned perfectly. **The Garage Door Opener Isn't Responsive** If your garage door opener isn't responsive, this may mean that there's an issue with the photo eye. Go to the breaker panel and try to turn it off and on. Make sure that the opener is plugged in properly. If all else fails, put another device in the electrical outlet that the opener is connected to see if the outlet itself is live or dead. **The Remote Control Isn't Working** Check your batteries first if your garage door remote buttons don't respond to being pressed. Make sure that the buttons are within the signal range of the opener. Steer your car into your driveway first before you press the button. If none of this works, use your garage door manufacturer's manual to reset the remote. **The Wall Switch Doesn't Respond** If your wall switch is dead, check the switch or the wiring. Test the wires by pulling them out of the switch and touching them together. If the opener reacts, the switch may be the issue. If there's no reaction, you'll need to replace the wires using 18- to 22-gauge wire. **MORE FROM QUESTIONSANSWERED.NET** COO/paulbr75/Pixabay For some people, the garage door is the front door of their property because they drive their vehicle into the garage and then enter the house through a side door. For others, it's just a door to a place filled with stuff that needs to be sorted through. However you see it, you need a secure door that doesn't jam and rarely needs maintaining. The look of the garage door is also important because it has to fit in with the rest of the property, and how well the door's insulated also has to be factored in if you want to work in the garage and you live in a cold-weather area. **Garage Door** The price of the door and how much installation will cost are also important things to take into account, but don't go for the cheapest garage doors without considering your options. You could take a single layer steel door made from a 24-gauge steel skin, but you'll be compromising on security and warmth. A double-layered door is more durable, more energy-efficient and helps to keep road noise out. The added insulation also makes the garage warmer and more secure. A triple layered door with expanded polystyrene insulation is the most durable door, but it won't be the cheapest to buy. **Automatic Garage Door Openers** Automatic garage door openers are more convenient than manual doors, and they're also safer if you come home late at night. You basically have two options: a belt drive or chain drive opener. A belt driven opener is quieter and quicker but it's not as durable as the chain driven equivalent and it's more expensive. If you live in a cold climate, you will need the added durability of the chain. If not, you'll have to weigh the pros and cons for yourself. **Garage Door Sizes** Standard overhead garage door widths are, generally, eight, nine or ten feet by seven feet for standard garage doors and twelve, fifteen, sixteen or twenty feet by seven for double garages. When you're thinking about constructing a double garage you have the option of installing a single door or a double door. Two single doors together often look better than one door and there are practical reasons to go this route. If you have a problem with one of the doors, you can still get your vehicles out of the garage through the other, and the price of two single doors is often very similar to one double. **Double Garages for RVs** If you own an RV, you'll need a bigger garage not just a bigger garage door. The standard garage door height of seven feet won't be high enough. You'll need a garage opening that's sixteen feet wide by eight feet tall and the ceiling height of nine feet. If you're building a new garage to accommodate your RV, make sure you have proper architectural plans in place that allow space for the RV, other storage items and maybe even another vehicle. **Garage Door Parts** There are loads of websites offering parts for garages so you can maintain the doors very cheaply. Whether you want new springs, rollers, locks or a remote, you'll only need a toolkit and some time to fix most of the issues that happen through wear and tear. The websites and retailers who sell you replacement parts also sell weatherproofing kits that can help you keep out the worst of the weather if you live in a cold weather area. **Common Problems with Garage Doors** You can repair a garage door yourself if you've got the right tools and you're confident enough to try, but if the door needs some major work, call an expert in. If the gear and sprocket assembly have begun to strip out because of wear and tear, you will find the opener making noise but not the door moving. This can be worrying but the work isn't expensive. Another common problem is the traveler or trolley becoming stripped out over time. The symptoms are the same as those with the gear and sprocket and the price for replacement is equally low. **MORE FROM LIFE123.COM** CCO/theredbeardagency/Pixabay A big garage can be a workshop for your projects, a place to store your expensive tools, a home for your car or a getaway for you when you need a break from the family. In truth, a garage does all of these jobs for most homeowners so this is a more important room of the house than most of us realize. If you're shopping for a new garage door to replace one that's seen better days, you have lots of choices. Do you go for a sliding, folding, up-and-over or roll-up door? Do you buy a steel, wood or composite door? Get it right and you won't need to replace the door for a long time. **Door Repair** Should you repair your existing door or replace it? The door is made up of lots of parts so repairing a garage door isn't like maintaining any other door in the home. You might have hinges that are worn or an opening mechanism that jams. Whatever the issue, in most cases you'll need an expert. Garage doors develop both mechanical and electrical faults. You could have a problem with the belt drive and the sensor for example, which are two parts of the garage door opener that require different skills to repair. **Photoelectric Sensors** Your door's photoelectric sensors, which prevent the door from closing when a person or object is in the doorway, sometimes develop a fault that's easily fixed so if you find that your garage doors won't close when you ask them to, it might be that the sensors are not aligned. There are two sensors placed about six inches from the ground that have to be lined up with one another in order to work. One sensor sends a beam towards the other so if one is misaligned, the door will not close. This is an easy fix as you can adjust the bracket housing one of the sensors until they are aligned again. **Servicing** How often should the garage door be serviced? Most experts recommend that the door is serviced once a year even if no issues arise. Your garage door is opened no matter what the weather is like outside so it will be damaged over time with use and through the weather so it needs to be looked at. Having a service will prolong the life of your garage door as the engineer will lubricate areas of the door, tighten up bolts and screws and adjust the spring tensions to make sure the door works as it was designed to. **New Door Prices** Let's consider the cost of a new door so you can work out if maintaining or repairing the existing door makes financial sense. The cost of the door depends on the size of the garage, the material used in constructing the door and the opening mechanism used. A wooden door on a typical eight or nine-foot single garage would be the cheapest option. If the door opening is a simple manual operation, you'll save even more of your hard-earned dollars. **New Door Options** Do you opt for a steel door or go for something else? The typical steel door is made of two layers of galvanized steel that's primed or painted with a strong topcoat. Steel doors are great because they can be painted to match your home and can be bought with or without insulation, however dents and corrosion can limit the life of a steel door. Wooden doors in cedar or redwood look great but they're not as durable as steel doors so perhaps a wood composite is the answer. These doors have a wooden frame covered with fiberglass sheets. They look like natural wood but have none of the disadvantages. **Garage Door Openers** Whether you need a door that opens at the push of a button for security reasons, for convenience or for a little of both, a belt-driven door opener adds to the home. They are easy to install and even the budget models are reliable and powerful enough to open the heaviest doors. You'll expect a remote control and a multi-function wall control with any garage door opener but opt for a wireless keyless entry system because that includes a keypad to open the door, which is ideal if there are lots of family members using the garage. **MORE FROM LIFE123.COM**
